

Module 4: Photogrammetry software programs

In addition to [Polycam](#), in module 4 I mentioned two computer-based and full-featured photogrammetry software programs:

- Capturing Reality's Reality Capture: <https://www.capturingreality.com/>
- Agisoft's Metashape: <https://www.agisoft.com/>

I personally use Reality Capture. Note that Reality Capture requires a Windows PC with an Nvidia CUDA graphics card. Metashape will work on both Windows PC's and Mac computers, and does not have a graphics card requirement.
